

QURAN AND SCIENCE

NAME: SHAHEER JAMAL
ROLL# 2025S-BCYS-017
TECHNOLOGY: CYBER SECURITY

وَهُوَ الَّذِي خَلَقَ اللَّيْلَ وَالنَّهَارَ وَالشَّمْسَ وَالْقَمَرَ
كُلٌّ فِي فَلَكٍ يَسْبَحُونَ

اور وہی ہے جس نے رات اور دن اور سورج اور چاند کو پیدا کیا۔ سب ایک گھیرے میں تیر رہے ہیں۔

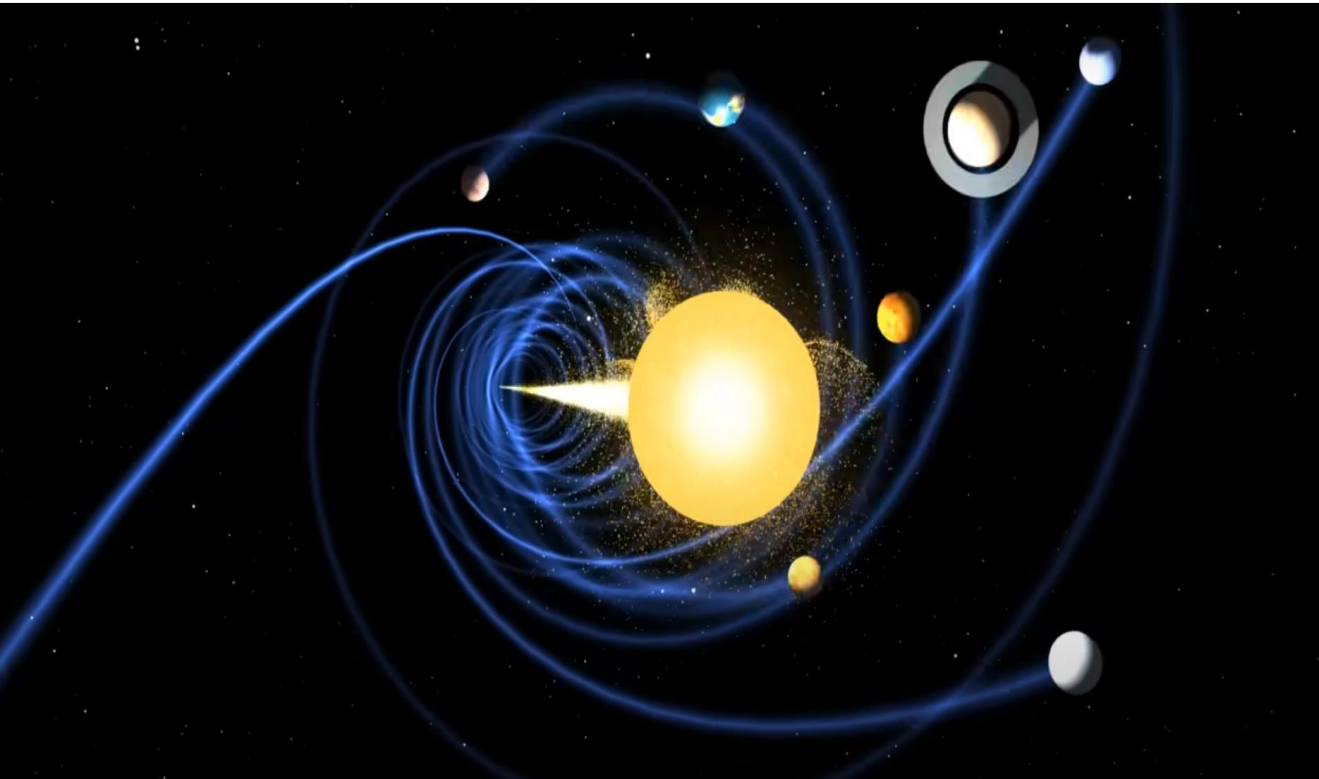

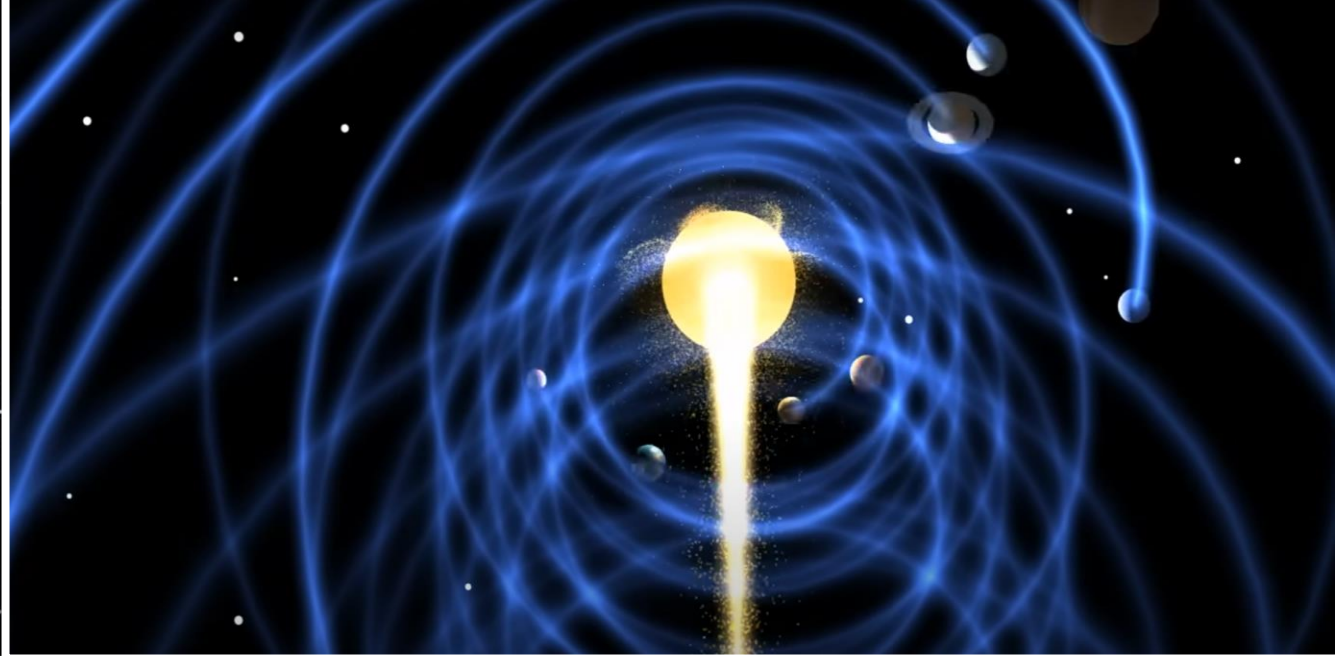

If one looks at the sun and the moon in the Wise Quran, it becomes known that each of them moves on its own specific orbit or specific path.

وَهُوَ الَّذِي خَلَقَ اللَّيْلَ وَالنَّهَارَ وَالشَّمْسَ وَالْقَمَرَ ۚ كُلٌّ فِي فَلَكٍ يَسْبَحُونَ

اور وہی ہے جس نے بنائے رات (ف ۲۳) اور دن (ف ۲۴) اور سورج اور چاند ہر ایک ایک گھیرے میں تیر رہا ہے (ف ۲۵) – (سورہ الانبیاء آیت ۳۳)

1. **The realities mentioned in the Quran have been discovered in our era thanks to modern astronomical observations.**
2. **According to the calculations and statistics provided by astronomers, the Sun is traveling at a speed of seven hundred and twenty thousand (720,000) kilometers per hour towards the star Vega in a specific orbit (Solar Apex).**
3. **Along with the Sun, the planets and asteroids under its gravitational pull are also covering this distance.**

4. **This means that the Sun travels an estimated one million seven hundred and twenty-eight thousand (1,7280,000) miles in a single day.**
5. **Furthermore, all the stars present in this universe are similarly moving in their own fixed orbits. This entire universe is moving in orbits and paths in the same way as it is in the Wise Quran:**

وَالسَّمَاءِ ذَاتِ الْحُبُكِ ۚ

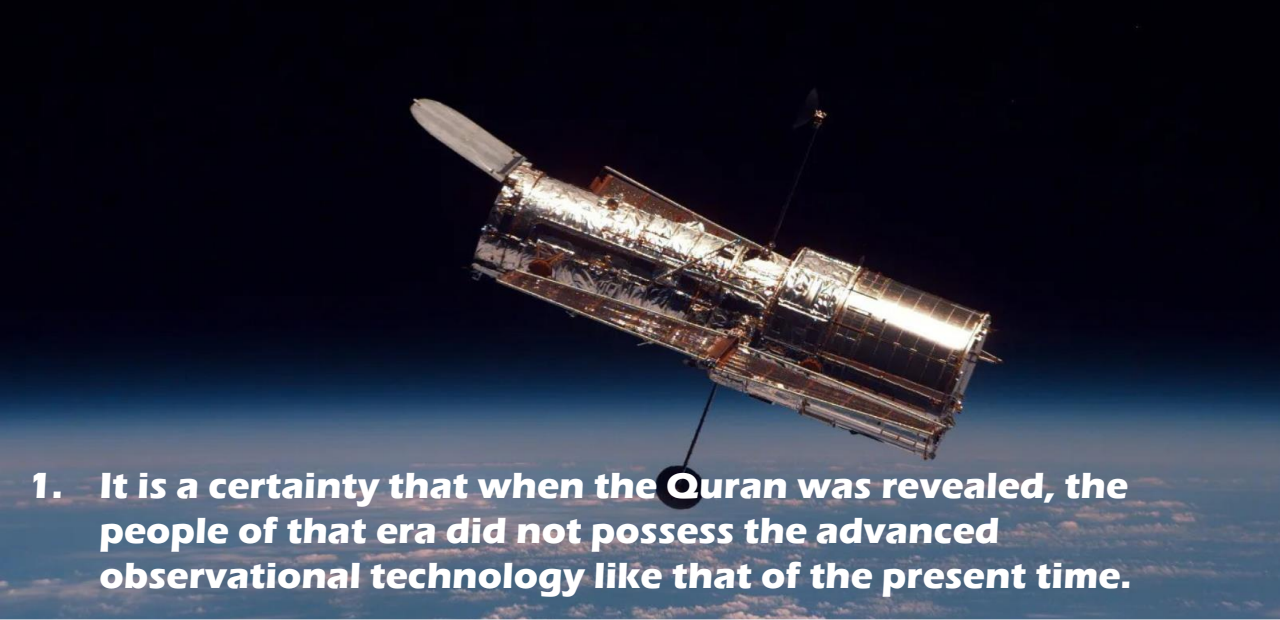

اور آسمان کی قسم جس میں راستے ہیں (الذاریات: 7)

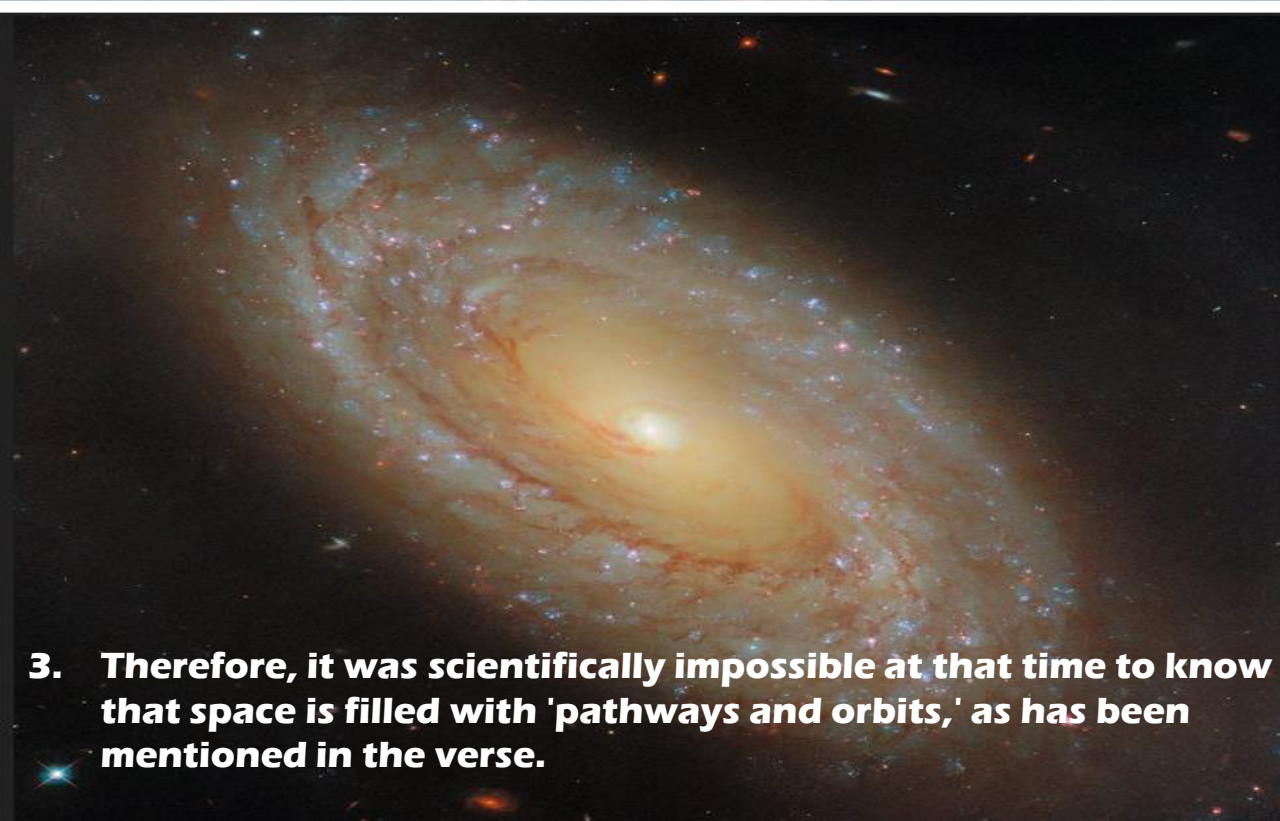

1. **There are approximately two trillion galaxies in the universe, each containing an estimated 200 billion stars.**
2. **Most of these stars have their own planets, and most of these planets have their own moons.**
3. **These planetary and celestial bodies travel in very defined orbits or fixed paths.**
4. **Hundreds of thousands, even millions, of celestial objects, along with all other bodies, are floating in their respective orbits with a specific kind of motion.**

5. **Furthermore, a significant number of comets are also moving in their own specific orbits**
6. **The orbits present in the universe are not exclusive to celestial bodies alone.**
7. **Galaxies also move at extremely high speeds along their determined and specific paths.**
8. **During their journey, none of these celestial objects intersect or collide with the predetermined path of another.**

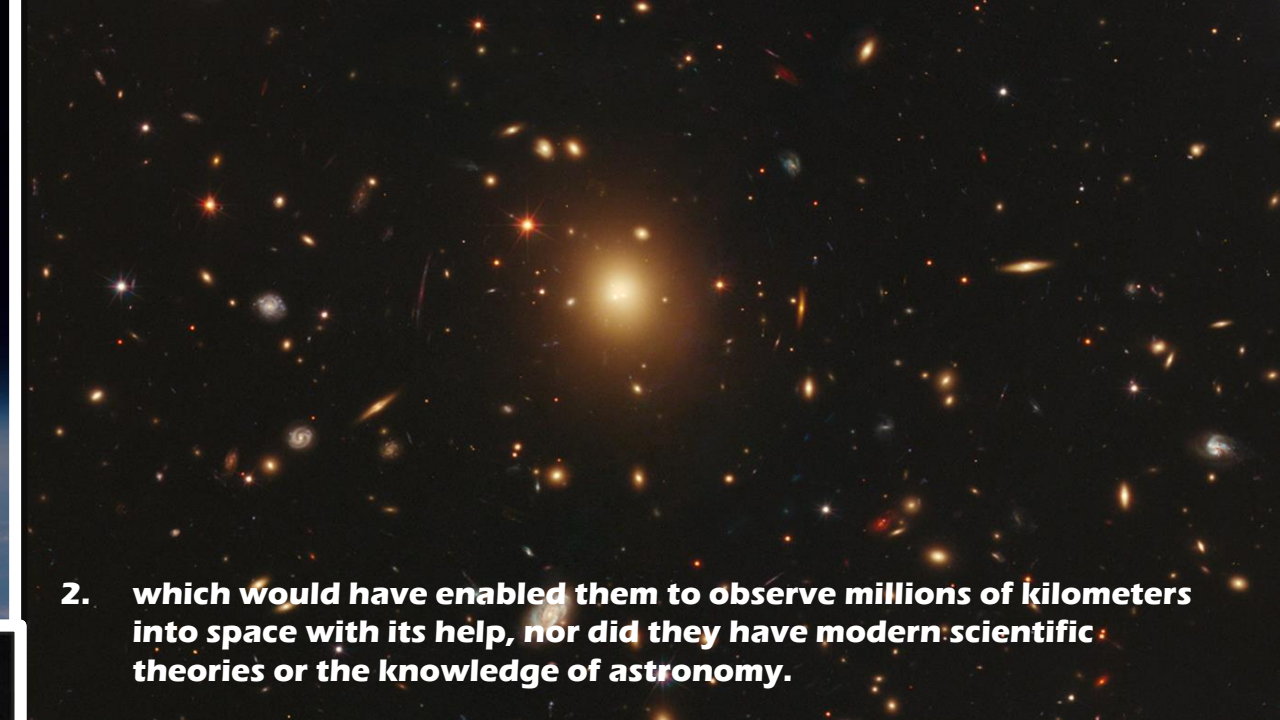

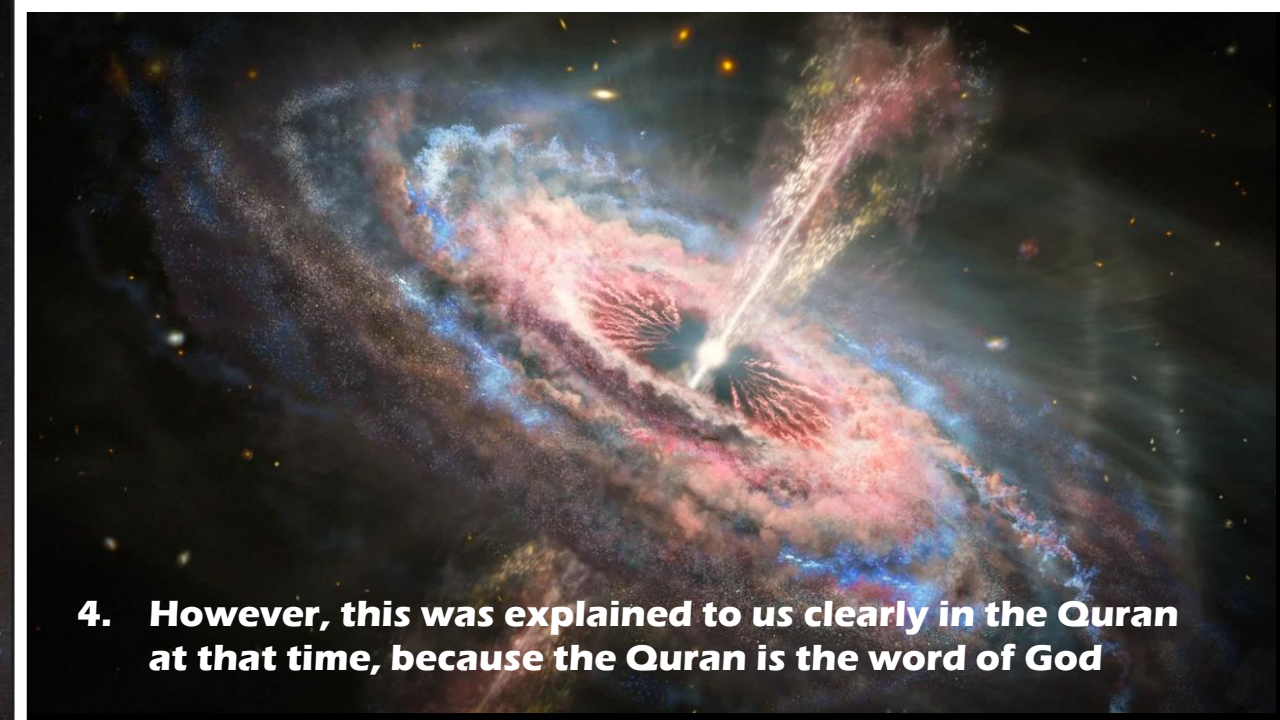

1. It is a certainty that when the Quran was revealed, the people of that era did not possess the advanced observational technology like that of the present time.

3. Therefore, it was scientifically impossible at that time to know that space is filled with 'pathways and orbits,' as has been mentioned in the verse.

2. which would have enabled them to observe millions of kilometers into space with its help, nor did they have modern scientific theories or the knowledge of astronomy.

4. However, this was explained to us clearly in the Quran at that time, because the Quran is the word of God
